DEVELOPMENT AND MANUFACTURING

Develop your tablet

Plan a tablet around your ingredient, target dose and intended user.

Manufacturing network

Annual capacity: 240 million tablets · 99% yield

CDMO	OEM	ODM

For product teams in nutrition, pharmaceutical and animal health

Choose a development model

A CDMO can develop and manufacture your formulation. An OEM makes it to your specifications. An ODM can also contribute to the design.

Evaluate the formulation

Examples include lutein esters, milk calcium, algal DHA, GABA and N-acetylneuraminic acid. Review taste, stability and dose for the selected ingredient.

Plan approval and delivery

Review a sample, agree on the evaluation criteria, then finalize the protective pack, artwork, production terms and delivery milestones.
